INTRODUCTION

This index contains supporting information about the 70-mm, 16-mm, and 35-mm photography taken during the Apollo 12 mission.

For each 70-mm frame, the index presents information on: (1) the focal length of the camera, (2) the photo scale at the principal point of the frame, (3) the selenographic coordinates at the principal point of the frame, (4) the percentage of forward overlap of the frame, (5) the sun angle (medium, low, high), (6) the quality of the photography, (7) the approximate tilt (minimum and maximum) of the camera, and (8) the direction of tilt. A brief description of each frame is also included.

The index to the 16-mm sequence photography includes information concerning the approximate surface coverage of the photographic sequence and a brief description of the principal features shown. A "remarks" column is included to indicate: (1) if the sequence is plotted on the photographic index map and (2) the quality of the photography. The pictures taken using the lunar surface closeup stereoscopic camera (35 mm) are also described in this same index format.

The National Space Science Data Center (NSSDC) wishes to thank members of the staff of the Mapping Sciences Laboratory, Manned Spacecraft Center, and the personnel of the Lockheed Electronics Company/Mapping Sciences Laboratory for providing their original index pages to NSSDC. The document preparation effort at NSSDC was under the direction of Mr. Arthur T. Anderson.

APOLLO 12 HASSELBLAD PHOTOGRAPHY (70 mm)

MAGAZINE Q

Frames AS12-50-7325 through 7459

This color (SO-368) magazine includes pictures taken just after translunar injection (TLI) and during lunar orbit 3. Three lenses -- 80, 250, and 500 mm -- were used. Earth, moon, spacecraft parts, and spacecraft interior are included. Targets of opportunity (TO) covered (or partially covered) are: 3, 4, 5, 10a, 11, 12, 18, 23, 26, 27, 30, 32, 34, and 35.

In general, the quality of the images is good, although camera movement and positioning of the camera axis near the sun caused nine frames to be nearly useless. Most lunar topography and all earth frames are oblique (or contain the whole sphere); five frames of Petavius-B are near vertical; 12 frames (not numbered) were skipped.

Five usable frames document the smear and liquid droplet movement on the circular hatch window and the left (square) window of the command service module (CSM) and were taken shortly after TLI. Apparently, this liquid was largely outside the innermost glass pane.

High-angle obliques (such as the Eratosthenes and Humbolt frames) tend toward a more reddish brown color, especially when the illumination is from a low to a medium angle.

MAGAZINE R

Frames AS12-51-7460 through 7588

Magazine R is 70-mm color photography of the lunar surface, plus some views of the earth. The photographs were taken from the command module (CM) at approximately 60 nautical miles orbital altitude. The majority of the photographs are oblique with a view on track or in a northerly direction. An 80-mm lens was used for all but 20 frames, which were recorded with a 250-mm lens. Photographic quality was good for 90 percent of the magazine. Eighty percent of the frames cover areas of the lunar surface on the near side, with 90 percent of these covering from 35° east longitude to 40° west longitude.

The following targets of opportunity are fully or partially covered:

7, 8, 9, 15, 23, 25, 26, 27, 29, 31, 32, 33, 34, 35, 36, 37, 39, 40, 42, 43, 44, 45, and 47.

MAGAZINE S

Frames AS12-52-7589 through 7762

Magazine S contains black and white orbital coverage of the lunar surface taken from an average altitude of 60 nautical miles. It consists of 173 frames, numbered from 7589 through 7762, photographed with 80-, 250-, and 500-mm lenses.

The coverage ranges from 130° east longitude to 45° west longitude and 15° north latitude to about 50° south latitude. Photographic quality ranges from poor to good.

Frames 7589 through 7600 are 80-mm low-oblique stereo coverage of Fra Mauro and target of opportunity 35. All frames are of good quality.

Frames 7669 through 7709 include 500-mm low-oblique to near-vertical stereo coverage of Fra Mauro and are of poor to good quality. The frames are partially exposed due to a camera shutter malfunction. Frames 7631 through 7668 are 500-mm low-oblique stereo coverage of Descartes and are of poor to good quality. Frames 7645 through 7668 are partially exposed due to a camera shutter malfunction.

Frames 7601 through 7630 and 7710 through 7762 were taken with a 250-mm lens. Frames 7605 through 7630 are 250-mm low-oblique to near-vertical stereo coverage of the southern edge of Herschel. The photographic quality is fair to good. Frames 7735 and 7738 through 7740 are 250-mm high-oblique exposures of Copernicus. The photographic quality is good. Frames 7761 and 7762 are blurred and not plottable.

MAGAZINE T

Frames AS12-54-7948 through 8120

Magazine T is 70-mm black and white photography of the lunar surface, taken from the CM. The entire magazine is a near-vertical stereo strip photographed with an 80-mm lens. The approximate coverage is from 125° east longitude, 3° south latitude to 55° west longitude, 3° north latitude. Sun angles are from low to high, and the photographic quality ranges from poor to good.

Frames 8083 through 8091 cover an area from the north tip of Fra Mauro to landing site 7. Landing site 5 is shown on frames 8108 and 8109. The target of opportunity coverage is as follows: 8 on frames 7954 through 7957; 13 on 8028 and 8029; 15 on 8033 through 8035; 18 on 8048 through 8051; 23 on 8056 through 8059; 26 on 8065 and 8066; 27 on 8068 through 8070; 32 on 8075 through 8077; 35 partially imaged on 8083 and 8084; 39 on 8087 through 8098; and 48 on 8108 through 8111.

MAGAZINE U

Frames AS12-53-7763 through 7947

Magazine U consists of overlapping stereoscopic 70-mm black and white imagery of Fra Mauro (41 frames), Descartes (41 frames), and Lalande (42 frames), photographed with a 500-mm lens. The remaining frames of the magazine are: four frames of the moon, probably taken during transearth coast, and 57 frames of the solar eclipse, 10 of which were exposed during a camera malfunction. The quality of the 500-mm Fra Mauro, Descartes, and Lalande imagery ranges from fair to poor on this magazine. Targets of opportunity 18 and 32 were also photographed on this magazine.

MAGAZINE V

Frames AS12-47-6869 through 7021

The first 16 frames of this color magazine are high obliques of the lunar surface taken from the LM while in lunar orbit. Target of opportunity 9 is included.

The remainder of this magazine illustrates the LM, deployed equipment, and the lunar surface around the landing area. Surface photography was exposed with the 60-mm lens. Included are the following four panoramas taken near the landing area:

1. 6941 through 6960

A 20-frame panorama from northwest at the ALSEP to north at the flag, then to east with the LM (sunglint) and Surveyor Crater; then to south and southwest including Bench Crater.

2. 6961 through 6981

A 21-frame panorama northwest from the LM, east to Surveyor Crater, and a 360° panorama back to the LM.

3. 6982 through 7006

A 25-frame panorama, 360°, taken from northeast of the LM looking west at the panel and flag; then to southwest at the LM and counterclockwise to south and west looking into Surveyor Crater; then looking northwest at the TV and back to the panel to complete the 360° circuit.

4. 7011 through 7015

A five-frame panorama from northwest to north showing (from left to right) a blocky mound, the ALSEP, the flag, and the antenna.

MAGAZINE X

Frames AS12-48-7022 through 7171

Magazine X is 70-mm black and white photography taken before, during, and after the second extravehicular activity (EVA) on the lunar surface. Each of the images has a reseau grid superimposed on the 60-mm lens.

Included in this magazine are panoramic views of the lunar surface taken from the LM window showing the flag, the ALSEP equipment, and the solar wind panel. Surveyor 3, the Surveyor Crater, Block Crater, and the color chart are also included.

Panoramas of areas on the lunar surface near the LM and Surveyor 3 are identified below:

1. 7031 through 7032

A two-frame view from the LM looking northwest at terrain near the LM.

2. 7088 through 7090

A three-frame panorama of the Surveyor Crater and a view to the northwest from the southeastern rim showing Surveyor 3, the LM, and the blocky rim of a small crater on the north slopes of the Surveyor Crater.

3. 7101 through 7105

A five-frame panorama to the northeast, inside Surveyor Crater, and a closeup view of Surveyor 3 with arm extended.

4. 7141 through 7143

A three-frame panorama of Block Crater, with a view to the west from the east rim showing the LM and the Surveyor Crater. Part of Surveyor 3 is visible at the extreme upper left of the panorama.

5. 7144 through 7147

A four-frame panorama of Block Crater with a view to the south from the north rim showing a view into Surveyor Crater. Surveyor 3 is visible in the upper left of the panorama.

6. 7153, 7156, and 7157

These three frames comprise a short panorama of the near terrain to the west of the LM.

7. 7167 through 7169

A three-frame panorama from the LM looking north at the ALSEP and flag.

MAGAZINE Y

Frames AS12-46-6715 through 6868

Magazine Y contains color photographs taken before, during, and after the first EVA. Each of the images has a reseau grid superimposed on the 60-mm lens. Included are the following seven panoramas of the area around the ALSEP deployment:

1. 6730 through 6745

A 16-frame panorama from west to northwest showing an astronaut before ALSEP deployment, to northeast at the flag, antenna, and LM (sunglint), to west with Surveyor Crater.

2. 6746 through 6763

An 18-frame panorama, 360°, taken from north of the LM, including Surveyor Crater, Surveyor, LM, flag, panel, and TV camera, and returning to Surveyor Crater.

3. 6764 through 6782

A complete 360° panorama from southeast of the LM on the rim of Surveyor Crater. This panorama includes Surveyor 3, Surveyor Crater, and the LM.

4. 6807 through 6811

A five-frame panorama from south to southwest showing an astronaut deploying the ALSEP. The LM, flag, and antenna are in the background to the south. A mound to the southwest is in the central portion of the panorama.

5. 6836 through 6844

A nine-frame panorama of "1000 Crater," northwest of Head Crater, showing the entire rim with numerous rocks.

6. 6845 through 6852

An eight-frame panorama of "1000 Crater," northwest of Head Crater, showing the entire rim with numerous rocks.

7. 6853 through 6855

A three-frame panorama to the west, containing Bench Crater to the extreme southwest, Head Crater to the west, and a blocky mound to the northwest.

MAGAZINE Z

Frames AS12-49-7172 through 7324

Magazine Z is 70-mm black and white photography taken on the lunar surface during the second EVA. A 60-mm lens with a reseau grid was used. Photographic content includes the core samples, tool kit, and views of Head, Bench, Halo, and Sharp Craters. The following are included in the magazine Z panorama:

1. 7209 through 7212

A four-frame panorama looking west to north showing the lunar surface. The lunar surface hand tool kit is in the center of the panorama.

2. 7213 through 7215

A three-frame panorama to the east over Head Crater, showing the LM.

3. 7223 through 7228

A six-frame clockwise panorama of Bench Crater, rim to rim, looking south from the north rim, showing the east, south, and west inner walls and large rocks on the floor.

4. 7229 through 7233

A five-frame counterclockwise panorama of Bench Crater from the north rim, showing the south and west walls and floor.

5. 7244 through 7256

A 13-frame counterclockwise panorama looking east into the sun, showing an astronaut, the LM, and numerous rocks. The panorama continues to the north and then to due west.

6. 7263 through 7269

A seven-frame counterclockwise panorama of Sharp Crater looking west from outside the eastern rim. Very blocky.

7. 7271 through 7275

A five-frame clockwise panorama of Sharp Crater looking from the east rim to the west.

8. 7308 through 7311

A four-frame panorama looking west showing the lunar surface, the lunar surface hand tool kit, and Astronaut Bean with hand tools.

9. 7321 through 7324

Originally a six-frame panorama of Surveyor Crater; frame 7325 is 90% washout and 7326 will not tie end of panorama. This panorama, which contains four frames, begins on the southwestern rim of Surveyor Crater looking east at Surveyor and the eastern inner slope of the crater, and pans counterclockwise to the LM on the northwestern rim.

MAGAZINE EE

Frames AS12-55-8121 through 8297

Photographic coverage of magazine EE is imaged on 70-mm black and white (SO-164) film. Exposures were made from the CM with camera focal lengths of 80 mm and 250 mm at approximately 60 nautical miles altitude. The 177 exposures are of poor to good quality. The 75-frame 80-mm stereo sequence of near-vertical exposures of the back side of the lunar surface are of good quality. Coverage is from approximately 113° east longitude, 5° south latitude to 34° east longitude, 11° south latitude. Target of opportunity 13 is covered on frames 8197 and 8198. Complete coverage of craters Kapteyn, Langrenus A, and Magelhaens was obtained. La Perouse Crater, excepting the very northern section, and the northern part of Langrenus Crater were also photographed in this near-vertical stereo sequence. Other coverage includes 80-mm high obliques of Reiner Crater in frames 8121 through 8123 and 250-mm high-altitude small-scale transearth injection (TEI) photographs of the eastern part of the lunar surface in frames 8201 through 8297. In this series, frames 8216 through 8225 show good detail. Six exposures of magazine EE are blank.

LUNAR MULTISPECTRAL CAMERA (LMC) S-158 Experiment Assembly Photography (70 mm)

For this experiment, four EL Hasselblad cameras with 80-mm lenses were mounted together in such a manner that they could be aimed and operated simultaneously.

Magazine AA - 80-mm lens - infrared black and white SO-246, 87C filter
(black), 114 frames

Magazine BB - 80-mm lens - medium speed black and white 3401, 47B filter
(blue), 150 frames

Magazine CC - 80-mm lens - medium speed black and white 3401, 29+ filter
(red), 150 frames

Magazine DD - 80-mm lens - black and white 3401, 58 filter (green), 150
frames

Camera mounts were perpendicular to the hatch window. Alignment was 57.5° pitched up from the X axis. The camera that used the black and white infrared film did not give as complete a coverage as the other cameras, since it was not turned on until midway into the sequence.

APOLLO 12 SEQUENCE PHOTOGRAPHY (16 mm)

MAGAZINES A through P

Magazines A through P are 16-mm color and black and white sequence photography of the lunar surface taken from the CSM and the LM. There are a total of 15 magazines lettered A through P, with the letter J excluded. All magazines are color with the exception of magazine I. The quality of the photography ranges from poor to good.

Magazines A through D portray (in order): transposition and docking, the LM in formation prior to landing, LM ascent from the CSM, and the LM being jettisoned. Magazine C also contains views of the landing site and the Surveyor 3 site as seen through the sextant. Significant surface features covered on these four magazines are the Pyrenees Mountains, the Mare Nectaris, and the craters of Theophilus, Descartes, and Lalande A.

Magazine E is a sextant photography stereo strip running from east to west covering such features as Theophilus Peaks, Lalande A, and Fra Mauro. Also included are Landmark Tracking Sites (CP-1, CP-2, DE-1, and FM-1). The last section of magazine E was taken after TEI and shows the eastern limb of the moon where Basin II, the farside terminator, and the Mare Smythii and Mare Crisium can be seen.

Magazines F through I include (in order) a sextant photography stereo strip, reentry, the CSM interior, and black and white oblique sequences of Herschel, Fra Mauro, and Lalande.

Magazine K contains exposures of the CSM, Fra Mauro, Lalande, Ptolemaeus, and the LM descent and landing.

Magazines L, M, N, and O were recorded from the LM after landing and include views of the deployed ALSEP, the American flag, the S Band Antenna, and some of the astronauts' activities during the first EVA.

Magazine P shows the earthrise, Basin II, and the nearside terminator.
